

HOSTED WEB FILTERING

Nov. 1st, 2012
Version 1.0

Servicad's Hosted Web filtering service provides employees with comprehensive web filtering and administrative tools to help enforce your policies regarding acceptable web usage. This cloud-based solution is hosted in secure data centres where web traffic requests are rapidly processed to ensure policy compliance.

HIGHLIGHTS

WEBSITE BLOCKING

Prevent misuse of internet access, and protect employees from accidentally accessing dangerous files and website content.

MONITORING & REPORTING

Detailed reports provide information about web activity within your organization, to prevent employees from abusing their internet access privileges.

POLICY CONTROL

Our intuitive policy-building engine allows you to create policies on websites, including flexible, time-based rules that only limit access to non-work-related sites at specific times.

KEY FEATURES

- ✓ Hosted web filtering protects corporate bandwidth and increases employee productivity
- ✓ Cloud-based solution requires no special hardware or software to implement
- ✓ Block access to dangerous and offensive files and websites
- ✓ Easy management tools allow users to create and enforce web usage policies

OUR SERVICES

Servicad's Hosted Web Filtering services provides a consistent, secure web browsing experience for all of your end-users, allowing you to create intuitive web policies to increase employee productivity and protect your organization against web-borne threats like malware and spyware.

All of these services are hosted in the cloud, eliminating the need to invest in expensive hardware and software. Choosing to host your web filtering service on the cloud also eliminates the need to perform costly and time consuming maintenance tasks, freeing up your staff to focus on your business.
